

February 14, 2012

Dear

SUBJECT: Analysis Results for Water Supply at

Humboldt

Township, Marquette County, Michigan

The United States Environmental Protection Agency (EPA) collected a sample from your private water supply on November 1, 2011. Attached is a tabulation of the sample analysis results. The EPA sampled your water supply to assess if past activities at the nearby Humboldt Mine and Mill site had affected groundwater and individual water supplies in the area.

The concentrations of inorganic substances and metals detected in the water supply samples were below established federal and state drinking water standards and health concern levels, and were similar to groundwater quality generally found in Central Marquette County. Organic chemicals were not found in your water supply samples at concentrations above the laboratory method detection limits, with the exception of a minor detection of the chemical, bis(2ethylhexyl)phthalate.

Bis(2-ethylhexyl)phthalate is a chemical that is commonly used in the manufacture of plastic products. When found in a water sample, it is usually due of the presence of plastic materials in the well pump or in the sampling equipment, and is likely not actually present in the groundwater supplying your water well. Even so, the EPA and the Michigan Department of Environmental Quality (DEQ) would like to re-test your well to confirm if this chemical is actually present or not. The EPA will contact you regarding a second access agreement and sample collection date. Analysis of the follow-up samples will also be performed for some inorganic substances not previously researched and for some organic chemicals at a lower laboratory detection limit.

The EPA and the DEQ appreciate your cooperation in these investigations. If you have questions about the sampling efforts, please contact Nuria Muñiz at 312-886-4439. If you have questions about the analysis results, please contact Chuck Thomas, DEQ by phone at 906-346-8534 or by email at thomasc3@michigan.gov.

Sincerely,

Muria Muñiz

## Symbol Key

MCL means maximum contaminant level ug/l means micrograms per liter and all analysis results as reported as ug/l SVOC means semi-volatile organic chemical VOC means volatile organic chemical

U after a number means not detected, but the result reported is the lab detection limit R after a number means the data may not be valid

J after a number means the substance was positively identified and the numerical value is an approximate concentration of the substance in the sample
